

Install LAMP Stack (Ubuntu)

We'll use:

- **Apache HTTP Server**
 - **MySQL**
 - **PHP**
- on **Ubuntu**

1. Update system

⟨⟩ Bash

```
sudo apt update
```

```
sudo apt upgrade -y
```

2. Install Apache

⌵ Bash

```
sudo apt install apache2 -y
```

Verify

Open browser:

http://localhost

You should see the Apache default page.

3. Install MySQL

⟨/⟩ Bash

```
sudo apt install mysql-server -y
```

Secure installation

⟨/⟩ Bash

```
sudo mysql_secure_installation
```

- Set root password
- Remove anonymous users

- Disallow remote root login
- Remove test database

4. Install PHP

⌕ Bash

```
sudo apt install php libapache2-mod-php php-mysql -y
```

5. Test PHP

Create a test file:

⌞ Bash

```
sudo nano /var/www/html/info.php
```

Add:

⌞ PHP

```
<?php  
phpinfo();  
?>
```

Save and open in browser:

Save and open in browser:

```
http://localhost/info.php
```

If PHP info page appears →  success

6. Restart Apache

⌞ Bash

```
sudo systemctl restart apache2
```

Optional: Test MySQL

⟨/⟩ Bash

```
sudo mysql
```

Security Step (Important)

Delete the test file after checking:

⟨/⟩ Bash

```
sudo rm /var/www/html/info.php
```

Done!

Your LAMP stack is ready:

- Apache → Web server
- MySQL → Database
- PHP → Backend scripting

Tips

- Web root: `/var/www/html`
- Start/stop Apache:

 Bash

⌘ Bash

```
sudo systemctl start apache2
```

```
sudo systemctl stop apache2
```
