

Install Linux on VirtualBox

1. Download required files

- Install **Oracle VM VirtualBox** from its official site
 - Download a Linux ISO (example: **Ubuntu**)
-

2. Install VirtualBox

- Run the installer
- Keep default settings
- Finish installation and open VirtualBox

3. Create a Virtual Machine

- Click **New**
 - Name: e.g., *Ubuntu*
 - Type: Linux
 - Version: Ubuntu (64-bit)
-

4. Allocate Resources

- RAM: Minimum **2 GB** (4 GB recommended) 
 - CPU: 2 cores (if available)
-

5. Create Virtual Hard Disk

- Select: **VDI (VirtualBox Disk Image)**
 - Storage: Dynamically allocated
 - Size: At least **20 GB**
-

6. Attach Linux ISO

- Select your VM → **Settings**
- Go to **Storage**
- Click Empty → Choose ISO file (Ubuntu you downloaded)

7. Start Installation

- Click **Start**
- Choose **Install Ubuntu**
- Follow on-screen steps:
 - Language
 - Keyboard layout
 - Time zone
 - Username & password

8. Complete Installation

- After install finishes:
 - Click **Restart**
 - Remove ISO when prompted
-

9. Install Guest Additions (Important)

Improves performance, screen resolution, and clipboard sharing.

- In VirtualBox menu: **Devices** → **Insert Guest Additions CD Image**
- Open terminal in Linux and run:

- Open terminal in Linux and run:

⌞ Bash

```
sudo apt update
```

```
sudo apt install build-essential dkms linux-headers-$(uname -r)
```

```
sudo mkdir /media/cdrom
```

```
sudo mount /dev/cdrom /media/cdrom
```

```
sudo sh /media/cdrom/VBoxLinuxAdditions.run
```

- Reboot VM

✓ **Done!**

You now have Linux running inside VirtualBox 🎉
